<u>CSS Classes Used and Why:</u>

Body{}: This allowed us to modify the overall default font for our web page

Header{}: We set our margins for the header

Table{}: We established a table with width of 100%

#logo{}: This allowed us to set the width and padding of our website logo

#select-category: This allowed us to modify the width of the select category tab

#search: This allowed us to set the width of our search bar

#search input{}: This enabled us to set the margins for the search input

#fav{}: This set the margins for the favorite button

Input, select{}: This is how we were able to customize the visuals for our search bar and when you hover over certain elements of the web page

Select{}: Allowed us to adjust the height of select

#cart{}: Allowed us to set the width of the cart element

#nav-table: Allowed us to set the height for our navigation table

#categories: Allowed us the adjust the overall visuals for the categories tab

#links: Allowed us to adjust the size for links

#links u1 l &&& #links u1 li:hover: Allowed us to adjust the visuals and size for links

Anything with XXX-Body or XXX-Img: Sets the size and margins for elements or images on the web page

<u>Future Possible Extensions to be Added with JavaScript</u>

For all div and picture elements, we would eventually like to incorporate animations into our web page.

<u>Individual Team Member Contribution:</u>

In order to complete this assignment, our group banded together and worked together on this assignment at the same time. However, in order to hasten the completion of this assignment, specific tasks were handed out to each of the group members. Specifically, Rohan and Joe and worked on the HTML of the assignment, and Jerry and Femi worked on the CSS. However, while each lab partner were specifically assigned parts of the assignment to complete, the group worked together and helped each other throughout the entire development process.
